

**DESCRIPTION**  
**Hart InterCivic – HVS 6.2.1 on Windows 7 Operating System**

1. Overview

A. This minor change in the Hart Voting System (HVS) encompasses moving HVS applications eCM Manager, BOSS, TRANS, Ballot Now, Tally, Fusion and Infusion to run on the Windows 7 Operating System (Win7) and supporting the existing peripherals and drivers including Oki printers and Kodak i600 series scanners. Additionally, with this change we add the Canon X10C scanner as a peripheral to Ballot Now.

2. Deltas

A. The only Delta in the HVS applications is the addition of the Canon X10C scanner to Ballot Now. This includes a code change installing the Canon X10C driver into Ballot Now code.

3. Scope

A. All applications port to Win7 and function as designed:

- 1) eCM Manager 1.1.7
- 2) BOSS 4.3.13
- 3) Ballot Now 3.3.12
- 4) Tally 4.3.10
- 5) Fusion utility
- 6) Infusion utility
- 7) TRANS utility

B. All peripheral hardware also functions as designed on the Win7 platform with Hart applications:

- 1) Hart Card Reader
- 2) COTS ballot printer (i.e., Oki C9650)
- 3) COTS report printers
- 4) Kodak i600 series scanners
- 5) Canon X10C scanner

4. Issues and Notes

- A. No issues were encountered.
- B. Kodak 600 series scanners passed for use with BN versions 3.3.11 and 3.3.12; Cannon scanner passed for use with BN 3.3.12.
- C. SERVO has not been ported to Win7.
- D. No Delta documentation is needed, as there are no significant workarounds or issues that vary from HVS 6.2.1 running on Win2k and HVS 6.2.1 running on Win7.
